How to resize images for ATDW

1. Right-click on the image you wish to resize. This will bring up this menu.

- 2. Click 'Edit' this should open the image in Paint.
- 3. Click 'Resize'

4. This will bring up this menu. It will default to change by Percentage, but you will need to change the 'resize by' to Pixels.

Resize and Skew $ imes$	Resize and Skew X
Resize By: Percentage Pixels Horizontal: 900 Vertical: 600	Resize By: Percentage Pixels Horizontal: 1800 1200 Maintain aspect ratio
Skew (Degrees)	Skew (Degrees)
Horizontal: 0	Horizontal: 0
Vertical: 0	Vertical: 0
OK Cancel	OK Cancel

- 5. Change the smaller number to meet the requirements of ATDW (above). So in this scenario, the vertical dimensions would be changed to 1200. This automatically changes the other number to be larger than the minimum, therefore large enough for ATDW.
- 6. Remember to SAVE AS your image file so that the original is not overwritten.
